EDUCATION

Sep 2024 – Jun 2027 **Shanghai Normal University** **M.Eng. in Communication Engineering（Supervisor: Yanhua Long）**

Sep 2020 – Jun 2024 **Xi'an Peihua University** **B.S. in Software Engineering**

RESEARCH INTRESTS

Automatic Speech Recognition (ASR); Speech Large Language Model (Speech-LLM).

INTERNSHIP EXPERIENCE

May 2026 – Present **AI Speech Algorithm R&D Intern | Baidu, ACG, Shanghai, China**

Conducted research on **Text-Guided Target Speaker ASR (TS-ASR)** for far-field voice interaction in smart-home environments. Used wake-word text as the target-speaker cue and developed cross-modal interactions between text and speech encoders to extract target-speaker representations. Integrated these representations into the Paraformer encoder, enabling the model to focus on the target speaker and suppress interfering speech under multi-speaker and complex-noise conditions. Extended the text-guided approach into **a unified framework that jointly models text and enrollment-speech cues**, supporting text-only, enrollment-only, and dual-cue inference within a single model. Further investigated embedding-free enrollment and low-frame-rate modeling for efficient speaker conditioning.

This work has been submitted to **ICLR 2027.**

Oct 2025 – Mar 2026 **Speech Foundation Model Research Intern | Unisound, AI Labs, Xiamen, China**

Proposed and implemented **Zipper-LoRA**, a parameter-efficient multilingual ASR tuning method for reducing cross-language interference in long-tail language scenarios. Completed 12-language training, evaluation, and analysis with Whisper + LLM, improving low-resource language recognition.

This work was published in **IEEE TASLP in 2026.** GitHub

PROJECT EXPERIENCE

Jul 2025 – Sep 2025 **Bridging the Gap: Speech-LLM vs. End-to-End ASR**

Compared Speech-LLM and E2E ASR architectures for multilingual conversational ASR. Introduced cross-attention fusion into a Whisper + mHuBERT dual-encoder system and verified that pre-tuning the speech encoder before LLM integration is more effective.

This work was published in **ICASSP 2026.** GitHub

Mar 2025 – Jun 2025 **MLC-SLM Challenge, INTERSPEECH 2025**

Led a team to build a Whisper + mHuBERT-147 dual-encoder system with Qwen2.5-7B. Applied LoRA to both the speech encoders and the LLM, and proposed three-stage training with language-specific prompting. Without extra data, achieved 33.1% / 41.7% relative improvement on development/test sets and ranked 7th out of 25 teams.

This work was published in Workshop on Multilingual Conversational Speech Language Model **(MLC-SLM).**
